

The Guidance You Need to Gain Recognition as an Environmental Wellness Leader

The benefits of going green extend far beyond reducing the negative impact on environmental health. Green cleaning initiatives—whether in commercial buildings, residential properties, schools and universities, or health institutions—can positively affect performance, productivity, tenant recruitment and retention, and reputation. However, while we all want to do something to help protect the environment and the health of our buildings, a lack of practical solutions and cost-effective implementation often impedes our progress.

Assessment Services Description

We understand that change is painful and change management is expensive. The Building Wellness Institute's Assessment Services are designed to help you gain a better understanding of your current indoor environment, and identify and execute green initiatives that align with your environmental wellness goals, requirements and budget.

Our consultants work primarily with property managers on site to evaluate their indoor environment and develop a green initiative that aligns with their goals and requirements. Whether you seek to implement an environmental wellness program, become greener, certify your cleaning company, or simply adopt green cleaning best practices, we provide the roadmap to get you there. Together, we will explore a wide array of solutions to achieve points toward LEED certification (such as retrofitting your bathrooms with touch-free fixtures or introducing high-performance cleaning) and help you to gain recognition as a leader in green cleaning and environmental wellness.

The Building Wellness Institute Difference—Safer, Healthier and More Productive Facilities

The Building Wellness Institute helps facility managers, building owners, building service contractors (BSCs), and environmental services staff protect the health and comfort of their building occupants through comprehensive training, consulting and assessment programs. Our training programs and services, delivered by seasoned professionals with cross-discipline expertise in occupational and environmental medicine, public health, industrial hygiene, toxicology, and chemical engineering, are designed to facilitate GS-42 certification, gain points toward LEED certification, and support a wide range of environmental wellness goals. For commercial buildings, long-term care facilities, and educational institutions, the Building Wellness Institute enables you to make a vital contribution to public health and the environment that delivers unparalleled gains—in reputation, revenue and regulatory compliance.

Execute green initiatives that align with your environmental wellness goals.
